

This is to certify that

Md Mesbah Uddin

Date of birth: 01.12.1987

has successfully completed the NOVA course

Quantitative Genetics in Animal Breeding

ECTS:	3	Level:	Ph.D.
Course code:		Course language:	English
Course dates:	8. – 13.6.2016	Course location:	Mikkeli, Finland
Organising NOVA institution:	University of Helsinki		

Course description:

Teachers: Prof. Piter Bijma, Wageningen University, Prof. Dirk Jan de Koning, SLU, Prof. Pekka Uimari, UH
The course was aimed at students with an interest in quantitative genetics or animal breeding. The course focused on understanding, analysing, and utilizing the genetic basis of quantitative traits for animal breeding and genetics, applied in the genomic selection era. It is expected that after the course students are ready to apply quantitative genetics theory in their own research projects and are skilled in adapting the new theories and techniques presented in the scientific literature. The course included lectures, exercises, and self-study sessions.

A handwritten signature in blue ink, appearing to read "Pekka Uimari", written over a horizontal line.

Pekka Uimari
Professor
University of Helsinki

NOVA is a university cooperation aimed at supporting the understanding of major global challenges in a Nordic context. We facilitate Nordic collaborative high quality, international level education for postgraduate students in fields where the critical mass in one country would be too small to offer courses, or in fields with a specific Nordic dimension, defined by, for example, geographical, climatic or cultural commonalities.
